Project setup instructions:

After cloning the project just open the project with vs code and open the terminal of the vs code or go to the project's path with CLI. Then follow the steps to run the project properly also type on terminal or vs code as follows:

1. npm install
2. npm start (if you want to run it to your local browser otherwise not needed)

Note: If you just run the command named "npm install" on your project's CLI or terminal. Then all the packages which I added on this project will be installed automatically.

If you face any kind of troubles do the procedures. Don't hesitate to ask me.
